Sable Acquires Perry Mason Claims

Sable Resources Ltd. (TSX.V: SAE) is pleased to announce the acquisition of the Perry Mason Claims. The claims are located approximately 2.5 km southwest of Sable's Baker Mill, and consist of epithermal gold-silver veins. The geology on the property is very similar to Sable's nearby Baker Mine, but remains largely unexplored. In 1985, trenching was completed over the most promising zones, and uncovered numerous quartz veins, ranging between 4 and 12 metres thick. One vein assayed a remarkable 4.81 ounces per ton gold, and 78.6 ounces per ton silver over 3 metres width - making it the richest in situ showing in the Toodoggone. A limited drill program was conducted in 1987 on the claims, but failed to intersect the high grade material at depth due to extensive faulting in the area. No work has been conducted on the area since.

Sable believes this Property has the potential to produce high grade ore for processing at the Company's nearby Baker Mill. The Perry Mason Claims share very similar geology with Sable's Baker Mine. The experience Sable gained in successfully developing Baker will be of great value in exploring and developing the Perry Mason claims. Work is scheduled to begin on the Perry Mason Claims in early June.

About Sable Resources Limited: <http://www.sableresources.com>

Sable Resources is focused on the development and exploration of its gold and silver properties in the Toodoggone region of northern British Columbia. Sable owns a modern, fully-permitted 250-ton per day mill and supporting infrastructure.
